

134198

Remarks

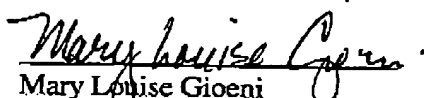

Claims 1-69 were originally filed with the present application. In a response dated April 27, 2006, claims 40-69 were cancelled. Therefore, claims 1-39 are currently pending.

The Office Communication dated June 6, 2006 states that Groups I, II and II will be examined, and that Applicants are required to elect a species with respect to charge-transfer promoting material and a species with respect to electronic device. Applicants are also required to elect an ultimate species for the charge-transfer promoting material.

For the species of charge-transfer promoting material, Applicants elect $\{A-R^3\}^n M^{n+}$. For the species of electronic device, Applicants elect EL devices. For the ultimate species for the charge-transfer promoting material, Applicants elect potassium triethoxysilylnaphthalene ("KNTES"). Claims 10, 17, 21, 30, 38 and 39 are herewith amended to their previous form. New claim 70 is added herein, and it is believed that the new claim is generic with respect to charge-transfer promoting material.

Applicants appreciate the Examiner's courtesy in pointing out that their previous reply was not fully responsive to the Office action. It is believed that all of the requirements therein have now been complied with.

Respectfully submitted,

Mary Louise Gioeni
Attorney for Applicants
